

USAID's Engendering Industries Best Practices Framework for Advancing Gender Equality in Male-Dominated Industries:

2.2 Consider targeted hiring to fill open positions and increase overall percentage of women in the company in general and/or in the technical areas

About Your Gender Equality Plan

The following Gender Equality Plan was generated using Engendering Industries' online tool: [The Best Practices Framework for Advancing Gender Equality in Male-Dominated Industries](#). The best practices listed in this plan were identified and included to fill gender equality gaps at your organization. The information included in your plan provides an overview of how to implement best practices, challenges to implementation, and markers of success. More information and resources for advancing gender equality at your company are available at EngenderingIndustries.org.

Description

Define targets for percentage of women, as well as women and men with diverse social identities, to be reached overall in the organization and within different management levels and technical functions, with an aim to reach strategic equality and D&I targets and increase balance of women and men within different parts of the organization

Conduct gender gap analysis^[1] to use a data-driven approach for target setting, align targets with company or national strategy, develop a stepwise plan to reach targets. and communicate effectively on aim to reach to create buy-in within the organization. Create a business case^[2] supporting the set hiring targets for women and individuals with diverse social identities

Become a signatory of an international agreement supporting gender parity, such as “Equal by 2030” or base your strategic approach on global movements such as the Women’s Empowerment Principles or the Sustainable Development Goals

Develop structured approach to apply inclusive hiring and recruiting practices and to eliminate bias against women and others with diverse social identities in recruitment (see below)

Challenges to Implementation

Pool of diverse female candidates may be much smaller than pool of male candidates, which may make it challenging to use fair evaluation criteria to get the desired diversity results; this may require giving an advantage to women with similar competencies as a man competing for the same role

Long-term target setting may be counteracted by volatility of the industry or other factors of uncertainty (e.g., limited mandate periods of decision makers)

Practices and workplace environment may not be ready to absorb newly hired women in a positive manner and may hinder women’s success

Setting hiring targets or quotas may spur resistance and "affirmative action backlash" where men feel disadvantaged by women and individuals with diverse social identities

Lack of transparency can lead to stigmatization of the hired women as being "chosen for quotas only"

What Success Looks Like

Clear hiring targets are set for the short-, medium- and long-term and there is transparency in mechanisms to reach these targets

Strong merit-based processes in place that guarantee women with diverse social identities can successfully perform in selection processes and can be hired

Workplace environment shows a welcoming attitude toward newly hired women with diverse social identities and support their success

Retention rate of women with diverse social identities after one to two years shows that the women feel well-equipped for the positions and can be successful
